India's Last Minute App

Blinkit Analysis

SQL + Power BI Dashboard

Company Overview:

Blinkit is a leading Indian quick commerce (Q-commerce) company founded in 2013 by Albinder Dhindsa and Saurabh Kumar. Initially known as Grofers, the company rebranded to Blinkit in 2021 to emphasize its commitment to ultra-fast delivery services. Blinkit specializes in delivering groceries, household essentials, and daily items within 10-15 minutes through its mobile app and website.

In 2022, Blinkit was acquired by Zomato for approximately \$568 million, a move that strengthened its market position and expanded its operational capabilities. Blinkit faces stiff competition from other Q-commerce giants such as Zepto, Swigik, Instamart, BigBasket Now, and Dunzo. Despite this, the company continues to grow rapidly, focusing on technological advancements like AI-driven demand forecasting to optimize inventory management and improve delivery efficiency.

PROJECT MOTIVE

Blinkit (or any retail chain) wants to **optimize sales and inventory planning** across different outlet types, sizes, and locations. The goal is to **identify sales patterns**, understand how **product attributes** (like fat content, weight, visibility, and type) and **store characteristics** (location, size, type) influence sales, and make **data-driven decisions** for:

- Stock planning and allocation
- Pricing strategies
- Product visibility optimization
- Outlet-specific promotional campaigns

Dataset Overview & Key Metrics

Data from Blinkit's grocery sales includes 12 key columns.

- **Item_Fat_Content** - Type of fat in the product (e.g., Low Fat, Regular).
- **Item_Identifier (TEXT)** - Unique code assigned to each product.
- **Item_Type (TEXT)** - Category or type of the product (e.g., Beverage, Snack).
- **Outlet_Establishment_Year** - Year in which the outlet/store was established.
- **Outlet_Location_Type** - Type of area where the outlet is located (e.g., Tier 1, Tier 2, Tier 3).
- **Outlet_Size** - Size of the outlet (e.g., Small, Medium, High).
- **Outlet_Type** - Type/category of outlet (e.g., Supermarket, Grocery Store).
- **Item_Visibility** - Percentage of shelf space the product occupies in the outlet.
- **Item_Weight** - Weight of the product in grams or kilograms.
- **Total_Sales** - Total sales of the product .
- **Rating** - Customer rating or score for the product (usually out of 5)

Summary of Key SQL Queries Used

1

Aggregations / Window Functions

Utilized `SUM`, `AVG`, and `COUNT` functions for comprehensive sales and ratings analysis ,also include dense rank ,rank window function .

2

Filtering Data

Employed `WHERE` clauses to filter by fat content, outlet type, and specific geographical locations.

3

CTE / Subqueries / joins

Leveraged CTEs ,subqueries and joins to integrate sales, product, and customer feedback data for holistic insights."

4

Grouping & Ordering

Leveraged `GROUP BY` and `ORDER BY` to rank top products and outlets effectively.

Dashboard 1

Dashboard 2

INSIGHTS

- **Fruits & Vegetables** consistently record the highest sales across most years, making them a dominant product category.
- The **average product rating** remains stable between **3.9 and 4.0**, indicating strong customer satisfaction.
- **Supermarket Type 1** ranks higher in terms of average sales (number of units sold).
- **Medium-sized outlets** achieve the highest sales, while large-sized outlets show comparatively lower performance.
- Blinkit sales grew steadily from 2012 to 2018, but declined in 2020 due to the impact of COVID-19.
- **2020** and **2022** show noticeable sales declines compared to previous years. ,because The drop in **2020** aligns with the **COVID-19 pandemic period** when: Supply chain disruptions limited stock availability. -- In-store promotions and product visibility decreased due to lockdowns and reduced foot traffic. **Recovery in 2022 was partial**, as volumes for many high-value categories still didn't return to 2018 levels
- In **Tier 3 locations**, **Seafood, Breakfast, and Others** categories have relatively low sales, while **Fruits & Vegetables, Snack Foods, and Household products** perform strongly.
- Across the years, **Seafood and Breakfast** categories show the lowest variation in sales, indicating stable but low demand.

Conclusion: Data-Driven Path Forward for Blinkit

Strategic Recommendations:

- **Boost Low-Performing Categories** Introduce limited-time discounts or “Buy 1 Get 1” offers for **Seafood, Breakfast, and Others**.
 - Bundle them with related high-demand products (e.g., Breakfast + Dairy).
 - Use social media campaigns highlighting freshness, health benefits, or recipes.
- **Maximize sales from best-sellers (Fruits & Vegetables, Snack Foods, Household)** by expanding inventory, offering combo deals, and introducing seasonal varieties.
- **Leverage medium-sized outlets** by prioritizing stock and marketing resources there **for medium-sized outlets**
- Promoting products that match local demand patterns ,Offering delivery on time ,Adjusting product mix
- **From 2022 onwards,post-COVID**, Blinkit should boost app promotions, run seasonal discounts, and ensure fast, reliable delivery to drive demand.
- **Target Tier 3 markets** with tailored promotions for high-demand categories and test introduction of premium or niche products.
- **Maintain product quality** to sustain high customer ratings, and consider strategies to push ratings above 4.0.

This data-driven approach will empower Blinkit to enhance operational efficiency, boost sales, and solidify its market leadership in the fast-evolving Q-commerce landscape.
